

Journal Manager provides a central access point for your complete journal collection, giving users a single source for browsing, searching, and accessing the library's journal resources. Journal Manager offers much more than just a user interface: weekly automatic updates maintain your holding, and Administrator tools provide Real-Time holdings updates, statistics reports, and interface customization.

Maintenance and Administration

Journal Manager is updated weekly to provide the latest titles, links, coverage dates, and TOCs. In addition to the standard weekly update, an online Administrator function is included that allows customers to:

- Update title collections and individual e-journals in **Real-Time**
- Customize the text and appearance of the Journal Manager "Home" page and A-Z title list
- Attach Journal Notes messages for user information to individual titles, or entire vendor/publisher collections
- Customize the TOC Alert and optional ILL/DocDel functions

TOCs & Current Awareness Tools

Journal Manager offers an optional Tables of Contents service that provides access to a rolling 18-month archive of TOCs for thousands of journal titles. The TOC service also adds new functionality, including:

- Browse TOCs that match your print/full text journal holdings, and expand your journal resources by adding TOCs for journals not in your collection
- Perform article title searches, as well as searches by author, volume, issue, publisher, vendor, etc.
- Link directly to the article-level (for select full text providers)
- Create profiles of "favorite" journals to receive TOC or Keyword Search Alerts via email
- Add an optional ILL/Document Delivery function to allow users to send article requests to library staff or directly to

ILL/Document Delivery

Journal Manager offers an optional ILL/Document Delivery function to allow users to send article requests via a simple "shopping cart" interface. Article requests can be sent to library staff via email, or directly to ILL/DocDel providers via email or via OpenURL link. The library staff can choose to display the article order option in all citations, or only in citations with no full text, or in citations with no full text and no print.

Integration with TDNet services

Journal Manager can be offered in combination with other TDNet services, including:

[Searcher Analyzer](#)

A unique solution for federated searching across external and internal resources. Features document searching and automatic categorizing and analysis of retrieved results, allowing users to quickly navigate through the results of large searches to find the information they need.

[TOUR Full Text Resolver](#)

NISO-compliant software package that links from reference databases to full text of OpenURL and non-OpenURL target resources. Fast setup and integration with TDNet's Journal Manager and an optional TDNet TOC service for enhanced link resolving and article-level linking.

[Holdings Manager](#)

Weekly service for updating your local catalog with CONSER MARC records, Brief MARC records, or other data options for maintaining the e-journal information and links in the OPAC.

Because these services can share the same knowledgebase as Journal Manager, users would receive consistent information about the library's holdings, regardless of which TdNet service was used to find or access the library's resources.

Easy Searching & Browsing

A user-friendly interface allows users to quickly find the journal they need. "Quick Search" is a tool for finding journals by title, issn, publisher, or vendor. Users can also browse the title list by clicking an alphabet button. An Advanced Search function (with searching/browsing titles by LC subject heading) is also included.

Quick Search Title [] Partial Words [] Go

Alphabetical list of journals on this site :

0-9	A	B	C	D	E	F	G	H	All
I	J	K	L	M	N	O	P	Q	
R	S	T	U	V	W	X	Y	Z	

Libraries that include the optional TdNet Tables of Contents in their e-Journal Manager website will also have links to current Tables of Contents via the title list display, and features like article searching and TOC Alerts via email.

Detailed Journal Information

Journal Manager provides detailed title information "at a glance" through the A-Z title list display. In addition to providing links to full text sources, users can see vendor/database information, online coverage dates, links to password information, print holdings links to the OPAC, and links to view Tables of Contents on the Publisher website.

The title list can be customized to display the data columns you want, and can also include custom notes to provide users with information related to a journal, publisher, or vendor database.
